Overview 概述

Snippets are reusable pieces of Liquid code that help you maintain consistency and reduce duplication across your theme. They let you encapsulate complex logic and markup into separate files that can be rendered anywhere in your theme.

片段是可重用的 Liquid 代码片段，可帮助您保持一致性并减少主题之间的重复。它们允许您将复杂的逻辑和标记封装到单独的文件中，这些文件可以在主题中的任何位置呈现。

Unlike sections and blocks, snippets are invisible to merchants in the theme editor. They're ideal for code that needs to be repeated throughout your theme, such as product cards, navigation elements, or form components.

与分区和块不同，代码片段在主题编辑器中对商家不可见。它们非常适合需要在整个主题中重复的代码，例如产品卡片、导航元素或表单组件。

How to use snippets 如何使用片段

Use the `{% render %}` tag to reference snippets in your Liquid code. It accepts named parameters that you can use to pass data to the snippet.

使用 `{% render %}` 标签引用 Liquid 代码中的片段。它接受可用于将数据传递到代码片段的命名参数。

```
1 {% render 'product-card',
2   product: product,
3   show_price: true,
4   max_description_length: 120
5 %}
```

For additional options for passing data to snippets, see [render tag parameters](#).

有关将数据传递到代码段的其他选项，请参阅[渲染标记参数](#)。

Variable scoping 变量范围

Inside snippets, you can't directly access variables that are created outside the snippet. However, you can:

- Access global objects like `product`, `collection`, and `section`
访问全局对象，如 `产品`、`集合` 和 `部分`
- Receive specific variables passed as parameters
接收作为参数传递的特定变量

Variables created inside a snippet remain local to that snippet and aren't accessible outside of it. In code blocks created within a snippet, variables remain local to that code block and aren't accessible outside of it.

Documenting snippets with LiquidDoc

使用 LiquidDoc 记录片段

[LiquidDoc](#) enables you to build and use snippets more effectively by providing a structured way to add documentation to your snippets.

[LiquidDoc](#) 通过提供一种结构化的方式将文档添加到代码片段，使您能够更有效地构建和使用代码段。

This documentation integrates with development tools to provide real-time feedback, parameter validation, and code completion while you work.

本文档与开发工具集成，可在您工作时提供实时反馈、参数验证和代码完成。

```
1 {% doc %}
2 Product card snippet
3
4 @param {string} title - The title to display
5 @param {number} [max_items] - Optional maximum number of items to show
6
7 @example
8 {% render 'example-snippet', title: 'Featured Products', max_items: 3 %}
9 {% enddoc %}
```

Learn more about how to use [LiquidDoc to work more effectively with snippets](#).
