

Config 配置

Config files define settings in the **Theme settings** area of the theme editor, as well as store their values. 配置文件在主题编辑器的主题设置区域中定义设置，并存储其值。

Theme settings are a good place to host general settings such as typography and color options. Theme settings can be accessed through the [settings object](#). 主题设置是托管常规设置（例如排版和颜色选项）的好地方。可以通过[设置对象](#)访问主题设置。

 Tip 提示

You can also create settings for [sections](#) and [blocks](#). These settings are defined as part of the parent section or block object, and appear in the theme editor with the associated object.

您还可以为[前面](#)和[块](#)创建设置。这些设置被定义为父分区或块对象的一部分，并与关联对象一起显示在主题编辑器中。

Location 位置

Config files are located in the `config` directory of the theme. When the theme contains market-specific customizations, the `markets.json` file is present in this directory:

配置文件位于主题的 [config](#) 目录中。当主题包含特定于市场的自定义项时，`markets.json` 文件将存在于以下目录中：

```

2 ...
3 └─ config
4   │   ├── settings_data.json
5   │   ├── settings_schema.json
6   │   └─ markets.json
