Templates 模板

Templates control what's rendered on each type of page in a theme.

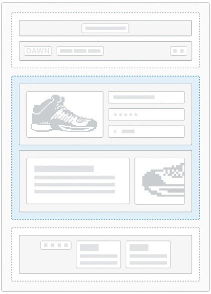
模板控制在主题中每种类型的页面上呈现的内容。

Each page type in an online store has an associated template type. You can use the template to add functionality that makes sense for the page type. For example, to render a product page, the theme needs at least one template of type `product`. Similarly, to render a metaobject page, the theme needs at least one template of type `metaobject/{metaobject-type}`, for example: `metaobject/book` or `metaobject/author`, depending on the type of metaobject definition.

在线商店中的每种页面类型都有关联的模板类型。您可以使用模板添加对页面类型有意义的功能。例如，要呈现产品页面，主题至少需要一个`产品`类型的模板。同样，要呈现元对象页面，主题至少需要一个类型为 `metaobject/{metaobject-type}` 的模板，例如：`metaobject/book` 或 `metaobject/author`，具体取决于元对象定义的类型。

You can create multiple versions of the same template type to create custom templates for different use cases. For example, you can create a separate product template for outerwear products, or a separate page template for pages with video content.

您可以创建同一模板类型的多个版本，以便为不同的用例创建自定义模板。例如，您可以为外套产品创建单独的产品模板，或为包含视频内容的页面创建单独的页面模板。



Templates control what is rendered on each type of page in a theme.

模板控制在主题中每种类型的页面上呈现的内容。

JSON vs. Liquid JSON 与 Liquid

There are two different file types you can use for a theme template: JSON and Liquid. These template file types can be used to build multiple template types, each of which represents a type of content in a merchant's online store.

您可以将两种不同的文件类型用于主题模板：JSON 和 Liquid。这些模板文件类型可用于构建多种模板类型，每种模板类型代表商家在线商店中的一种内容类型。

Type 类型	Description 描述
JSON	JSON templates are data files with the `.json` file extension. These templates let you easily populate your template with content from sections. Sections can be added, removed, or rearranged by merchants using the theme editor. JSON 模板是文件扩展名为 `.json` 的数据文件。这些模板可让您轻松地使用部分的内容填充模板。商家可以使用主题编辑器添加、删除或重新排列版块。 If you're using a JSON template, then any HTML or Liquid code needs to be included in a section that's referenced by the template. 如果您使用的是 JSON 模板，则任何 HTML 或 Liquid 代码都需要包含在模板引用的部分中。 To learn more, refer to JSON templates. 要了解更多信息，请参阅 JSON 模板 。
Liquid 液	Liquid templates are Liquid markup files, with the `.liquid` file extension. You can add Liquid and HTML directly to Liquid templates. Liquid 模板是 Liquid 标记文件，文件扩展名为 `.liquid`。您可以将 Liquid 和 HTML 直接添加到 Liquid 模板中。 To learn more, refer to Liquid templates. 要了解更多信息，请参阅 Liquid 模板 。

Choosing JSON vs Liquid 选择 JSON 与 Liquid

If you want to use sections in a template, then you should use a JSON template.

如果要在模板中使用部分，则应使用 JSON 模板。

JSON templates provide more flexibility for merchants to add, remove, and reorder sections, including app sections. Additionally, they minimize the amount of data in settings_data.json. Instead, data is stored directly in the template, which improves the performance of the theme editor.

JSON 模板为商家提供了更大的灵活性来添加、删除和重新排序版块，包括应用版块。此外，它们还最大限度地减少了 settings_data.json 中的数据量。相反，数据直接存储在模板中，这提高了主题编辑器的性能。

Template types 模板类型

Each available template type represents a type of content in a merchant's online store. No template types are required. However, you must have a matching template for any page type that you want to render. For example, to render a product page, you need at least one template of type `product`.

每种可用的模板类型都代表商家在线商店中的一种内容类型。不需要模板类型。但是，您必须为要呈现的任何页面类型提供匹配的模板。例如，要呈现产品页面，您至少需要一个`类型为 product` 的模板。

You can have a maximum of 1000 JSON templates in your theme, across all template types. For example, if you have 20 JSON product templates, 10 JSON page templates, and 5 JSON collection templates, then you can add up to 965 additional templates to the theme.

您的模板中最多可以有 1000 个 JSON 模板，涵盖所有模板类型。例如，如果您有 20 个 JSON 产品模板、10 个 JSON 页面模板和 5 个 JSON 集合模板，则最多可以向主题添加 965 个其他模板。

You can use the following template types in your theme. To learn more about each template type, click on the template name.

您可以在模板中使用以下模板类型。要了解有关每种模板类型的更多信息，请单击模板名称。

Type 类型	Description 描述
404	Renders page content that is shown to customers if they enter an invalid URL for the store. 呈现在客户输入商店的无效 URL 时向客户显示的页面内容。
article 品	Renders the article page, which contains the full content of the article, as well as an optional comments section for customers. This template is used for items like individual posts in a blog. 呈现文章页面，其中包含文章的完整内容，以及供客户使用的可选评论部分。此模板用于博客中的单个帖子等项目。
blog 博客	Renders the blog page, which lists all articles within a blog. 呈现博客页面，其中列出了博客中的所有文章。
cart 车	Renders the `/cart` page, which provides an overview of the contents of a customer's cart. 呈现 `/cart` 页面，该页面提供客户购物车内容的概述。
collection 收集	Renders the collection page, which lists all products within a collection. 呈现产品系列页面，其中列出了产品系列中的所有产品。
customers/account 客户/账户	Renders the customer account page, which provides an overview of the customer's account. 呈现客户帐户页面，其中提供客户帐户的概述。
customers/activate_account 客户/activate_account	Renders the customer account activation page, which hosts the form for activating a customer account. 呈现客户帐户激活页面，该页面托管用于激活客户帐户的表单。
customers/addresses 客户/地址	Renders the customer addresses page, which allows customers to view and manage their current addresses, as well as add new ones. 呈现客户地址页面，该页面允许客户查看和管理其当前地址，以及添加新地址。
customers/login 客户/登录	Renders the customer login page, which hosts the form for logging into a customer account. 呈现客户登录页面，该页面托管用于登录客户帐户的表单。
customers/order 客户/订单	Renders the customer order page, which displays the details of a customer's past orders. 呈现客户订单页面，其中显示客户过去订单的详细信息。
customers/register 客户/注册	Renders the customer register page, which hosts the form for customer account creation. 呈现客户注册页面，该页面托管用于创建客户帐户的窗体。
customers/reset_password 客户/reset_password	Renders the password reset page, which hosts the form to reset the password for a customer account. 呈现密码重置页面，该页面托管用于重置客户帐户密码的表单。
gift_card.liquid gift_card.液体	Renders the gift card page, which displays the gift card issued to a customer upon purchase. 呈现礼品卡页面，其中显示购买时发放给客户的礼品卡。 This must be a Liquid template. 这必须是 Liquid 模板。
index 指数	Renders the home page of the store, located at the root URL (`/`). 呈现商店的主页，位于根 URL （`/`） 处。
list-collections 列表集合	Renders the collection list page, which lists all the store's collections. This page is located at the `/collections` URL of the store. 呈现集合列表页，其中列出了商店的所有集合。此页面位于商店的 `/collections` URL 中。
page 页	Renders the shop's pages, such as **About us** and **Contact us**. 呈现商店的页面，例如" **关于我们** "和" **联系我们** "。
password 密码	Renders the `/password` page, which is a landing page shown when you add password protection to your online store ↗. This page includes a message that is editable by merchants, and the password form for customers to gain access to the store. 呈现 `/password` 页面，这是向在线商店添加密码保护 ↗ 时显示的登录页面。此页面包括商家可编辑的消息，以及客户访问商店的密码表单。
product 产品	Renders the product page, which contains a product's media and content, as well as a form for customers to select a variant and add it to the cart. 呈现产品页面，其中包含产品的媒体和内容，以及供客户选择变体并将其添加到购物车的表单。
robots.txt.liquid robots.txt.液体	Renders the `robots.txt` file, which is hosted at the `/robots.txt` URL. This file tells search engines which pages can, or can't, be crawled on a site. 呈现托管在 `/robots.txt` URL 上的 `robots.txt` 文件。该文件告诉搜索引擎哪些页面可以在网站上抓取，哪些页面不能被抓取。 This must be a Liquid template. 这必须是 Liquid 模板。
search 搜索	Renders the `/search` page, which displays the results of a storefront search ↗. 呈现 `/search` 页面，该页面显示店面搜索 ↗ 的结果。
metaobject 元对象	Renders metaobject pages, such as "artists" or "authors". To render each metaobject entry as an individual page, the metaobject definition must have the web page capability. 渲染元对象页面，例如"艺术家"或"作者"。要将每个元对象条目呈现为单独的页面，元对象定义必须具有网页功能。

Note 注意

The `gift_card` and `robots.txt` templates can't be JSON templates, so you must make them Liquid templates. Other template types support either template file type.

`gift_card` 和 `robots.txt` 模板不能是 JSON 模板，因此您必须将它们设置为 Liquid 模板。其他模板类型支持任一模板文件类型。

Location 位置

Template files are located in the `templates` directory of the theme:

模板文件位于主题的 `templates` 目录中：

```
└── theme
  ├── layout
  ├── templates
  |   ├── 404.json
  |   ├── article.json
  |     ...
  ...
```

Content 内容

The content that you can include in a template depends on whether it is a JSON template or a Liquid template.

您可以包含在模板中的内容取决于它是 JSON 模板还是 Liquid 模板。

You should always keep the goal of the template type in mind when deciding what content you want to include in a template. For example, a product template, or a section in the product template, should always include the `product` object, which renders product details, and the product form tag, which lets customers add a product variant to the cart. Depending on your template type and approach, you might want to include these items in a section that you reference in the template.

在决定要在模板中包含哪些内容时，应始终牢记模板类型的目标。例如，产品模板或产品模板中的部分应始终包含产品对象（呈现产品详细信息）和产品表单标签（允许客户将产品多属性添加到购物车）。根据模板类型和方法，您可能希望将这些项包含在模板中引用的部分中。
